Figure 20: Percentage of Women Accessing Family Planning

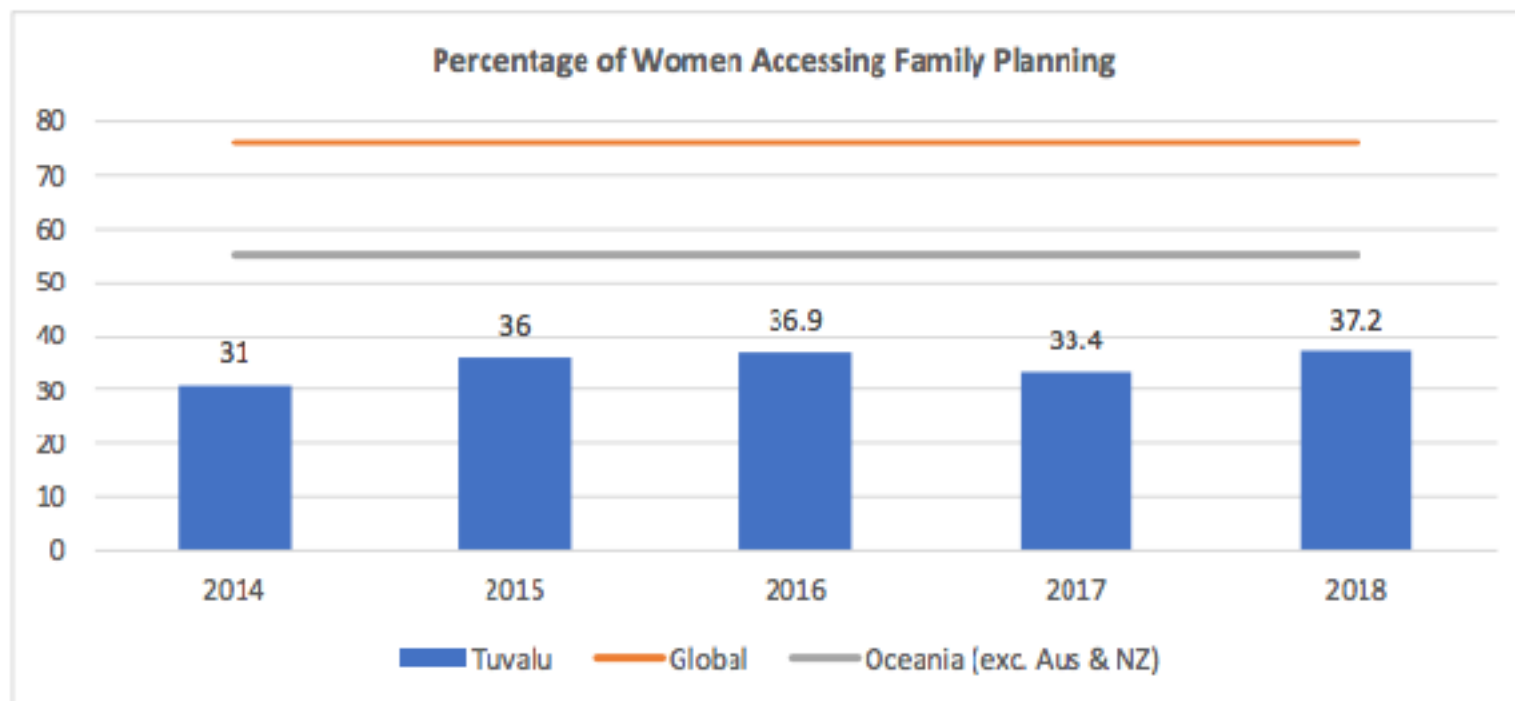

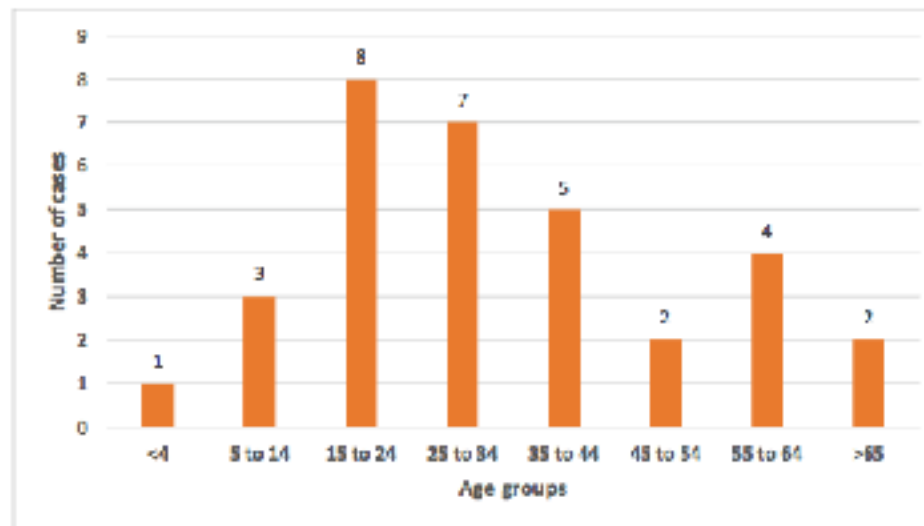

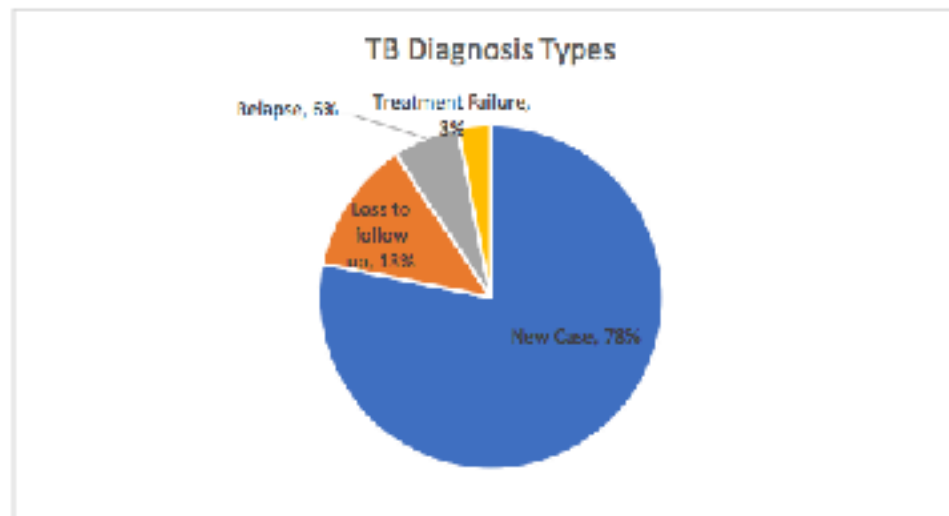

Figure 22: Number of TB Cases by Age Group in 2018

Only one patient was aged under 5 years of age, three patients were aged between 5-14. Male to Female ratio of cases was 1:1. Nine (28%) of the patients had diabetes as a co-morbidity, no cases of HIV-TB co-infection was detected among all the patients.

Figure 23: TB Diagnosis Types

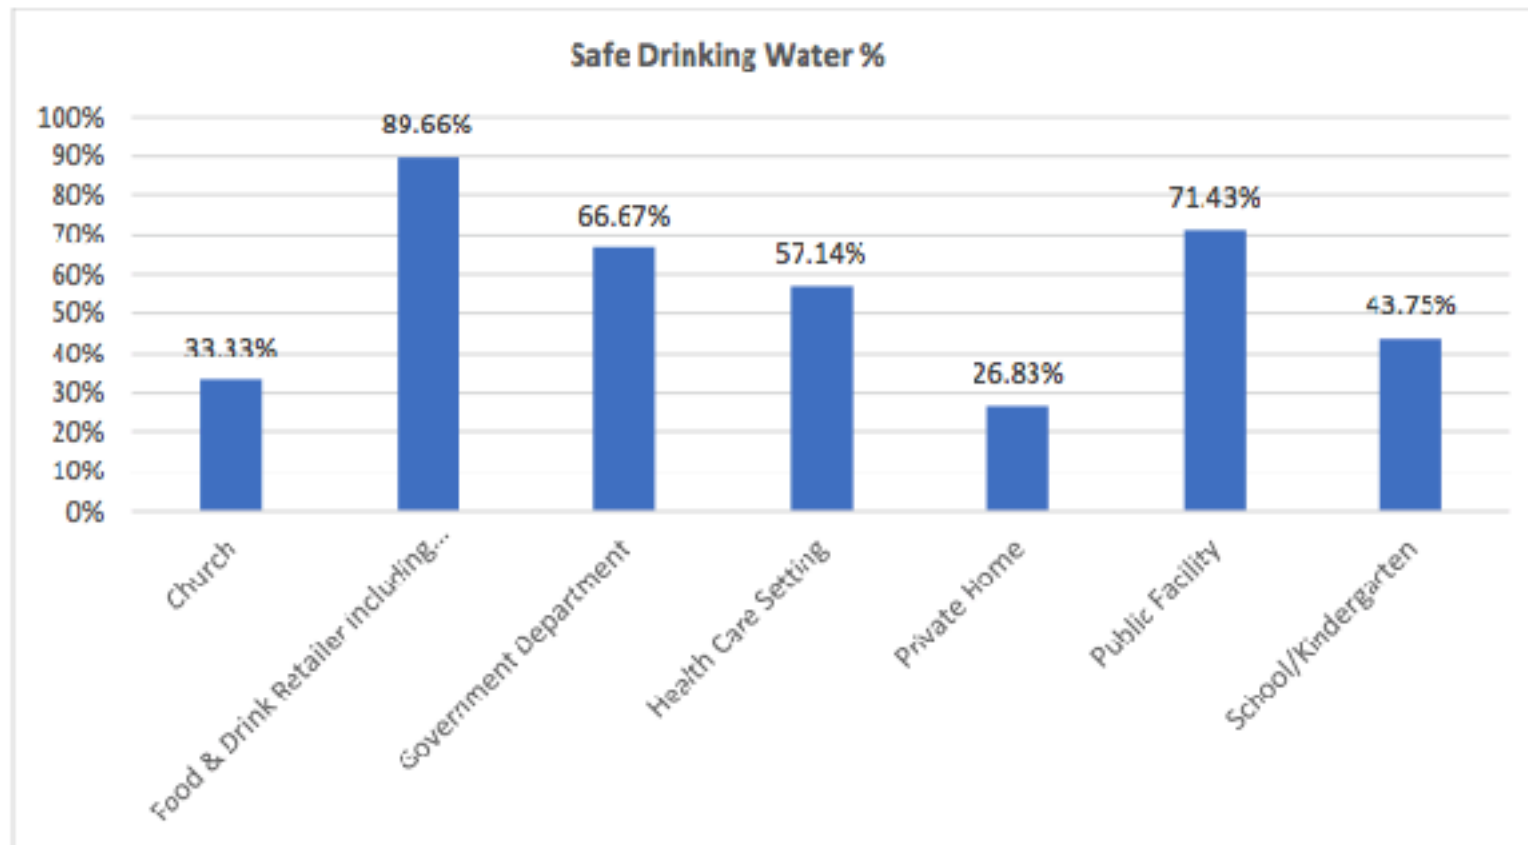

The vast majority (78%) of episodes were newly diagnosed cases, with patients who had been lost to follow-up comprising 13%, relapsed patients 6% and treatment failure 3%. Twenty-one (21) patients were diagnosed with TB of the lungs (Pulmonary) with the remaining eleven patients diagnosed with extrapulmonary TB (outside the lungs). Five of these cases involved the lymph nodes, bone, pleural and genitourinary cases were also diagnosed and treated. Two deaths as a result of tuberculosis were reported in 2018.

ANNEXURES

Nutritional Status Children Aged > 5 Years

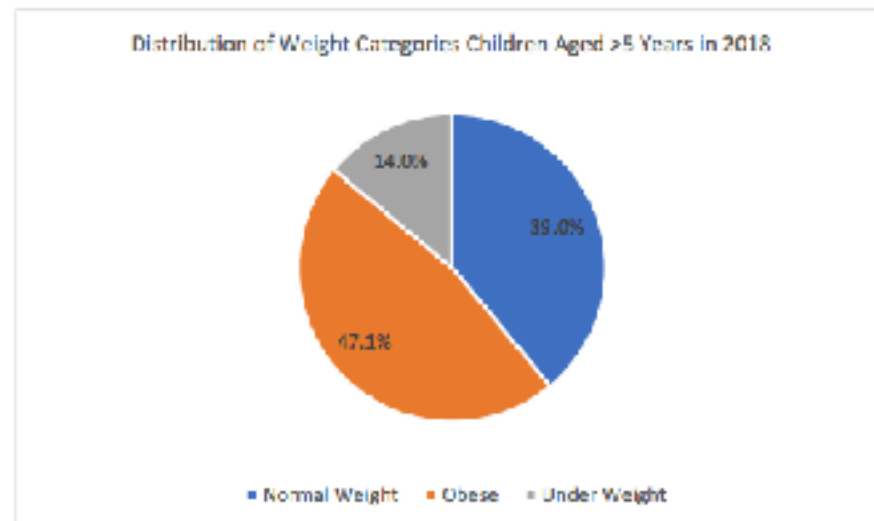

In 2016, an estimated 41 million children under the age of 5 years were overweight or obese. Once considered a high-income country problem, overweight or obesity are now on the rise in low and middle income countries, particularly in urban settings. Childhood obesity is associated with a higher chance of obesity, premature death and disability in adulthood. But in addition to increased future risks, obese children experience breathing difficulties, increased risk of fractures, hypertension, early markers of cardiovascular disease, insulin resistance and psychological effects^{xx}.

Figure 40: Comparison of Weight Category of Children Aged Under 5 Years 2015 - 2018

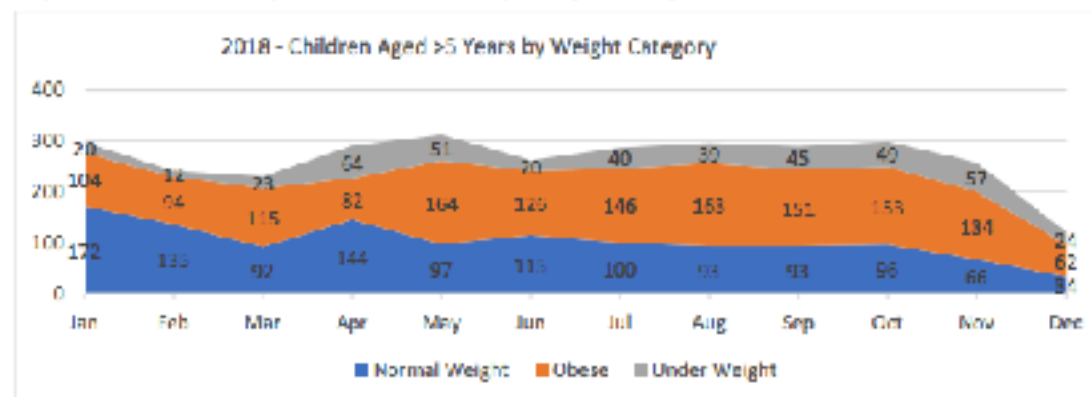

The proportion of children under the age of 5 years in the normal weight range has decreased over the last four years, with a corresponding increase in the number of children considered obese. The proportion of underweight children has also risen over the four-year period.

Figure 41: Distribution of Weight Categories of Children Aged Under 5 Years

In 2018 only 39% of children measured in the normal weight range, with 47% considered obese and 14% underweight.

Figure 42: Children Aged Under 5 Years by Weight Category in 2018

The graph above highlights the proportion of children under the age of 5 years in the different weight categories per month. From May to December there was a steady decrease in the number of normal weight children and a corresponding increase in the number of obese children. The rate of underweight children remained constant.

A number of initiatives are in place to try and arrest the trend of increasing obesity and underweight in children under the age of 5.

Every effort is made to encourage all mothers to breastfeed babies at birth, exclusively breastfeed up until six months of age and then continue breastfeeding until the child is two years of age. This message, including the important health benefits of breastmilk, is delivered as part of antenatal visits, while the mother is in hospital and again at post-natal and maternal and child health follow-up visits.

ANNEXURES

Figure 43: Dental Patients Treated by Location

Presentations Funafuti Clinic	Adult	Children	Total
Female	967	171	1138
Male	963	133	1096
Total	1930	304	2234
Percentage	86.4%	13.6%	

Table 38: Comparison of Dental Patients by Age 2017 - 2018

Presentations	2018	2017
Adult	1930	2530

85

Children	304	200
Total	2234	2730

The relatively small number of children presenting for treatment remains a concern. Fear of dental treatment, lack of parental support to motivate children to visit the dentist and lack of general education and awareness in the community regarding the importance of good oral hygiene are major barriers.

ANNEXURES

Oral Health Status in Tuvalu

The most recent Oral Health Survey of the population of Tuvalu was undertaken in 2014 and showed some alarming results:

- 83% of 3-5-year old have dental caries with an average of 6.7 teeth affected;
- 95% of 6-8-year old have dental decay with an average of 6.6 teeth affected; and
- The ratio of 12-year old with decayed missing teeth was 3.3, above the baseline target of 3.0
